

10 steps to the future

1. Plan
your healthcare campuses to meet patient-centric wellness and lifestyle trends

With patients taking a greater personal interest in their own health and wellbeing, how will you plan your spaces to respond to healthcare as it moves away from being reactive and intermittent and becomes proactive and continuous?

2. Prepare
your building for the future with the design of flexible and truly adaptable space

How will you plan your space to meet the future challenges of truly personalised care delivered straight to the patient's home?

3. Understand
how today's Future Ready design enables optimal adjacencies for tomorrow

As healthcare systems morph and evolve and the patient becomes the point of care, how will you plan your space to ensure its optimum location for its future purpose?

4. Challenge
your design team to develop environmental controls to combat higher peak temperatures

With the world's average temperature predicted to rise by up to 4.8°C by 2100 compared to the turn of the century, how will you prepare?

5. Create
your technological centre of excellence to enable real-time data and diagnostic monitoring that provides one-stop diagnosis & treatment

As patients become more and more involved in their own wellness with the use of apps and wearable micro-devices, how are you going to respond in the development of your space and facilities?

6. Recognise
the impact of changing treatment regimens on your facility and space requirement as medical science makes exponential progress

What are the consequences of the advances we are making in combating major disease through progress in immunology, stem cell technology and genomics?

7. Prioritise
your investment in spaces that will remain relevant as healthcare becomes more person-centric and community focused

With a shift in focus towards a decentralised model of care, how will you invest in your estate?

8. Make
use of new and sustainable materials and surfaces that resist infection and self-heal

As costs rise and the drive to deliver buildings sustainably and economically increases, what changes should you make in the development and maintenance of your healthcare buildings?

9. Maximise
your revenue opportunities by understanding the dynamic change in future healthcare trends

The population will continue to grow and people will live longer, so how will you deliver more healthcare for more people with less funding per head?

10. Optimise
your facilities operational performance and maintenance of assets by use of smart technology so assets are efficient, responsive & connected

In a technologically developing world, with increasing electricity costs, how will you ensure optimal patient experience and minimise energy consumption?
